

Sebastien Robin: Channel Sales Manager

Lumison Leased Lines and Metro Ethernet solutions, no hassle, no contention, no worries.

It's a dedicated, high-speed Internet solution designed to meet the demands of business. Thanks to recent price changes within the telecommunications industry, a 2Mb leased line or 10Mb MetroEthernet service could be a lot cheaper than you think.

Not so long ago leased lines were only for big companies – not any more. You may host servers in your office, have a virtual private network (VPN) linking to multiple sites, or simply have a large number of users. If you use VoIP or require a truly business-class service level agreement or a connection to the Lumison datacentre for backup or data replication, or all of these benefits, then a leased line or MetroEthernet connection is for you.

Leased lines

Lumison provides the most competitive leased line packages to small and large business users alike. In fact, based on bandwidth-on-demand for scalability, our leased lines are amongst the most competitive and reliable in UK.

To support features such as simple fire-walling and routing, up to a powerful Virtual Private Network (VPN) and ISDN backup to keep things safe and secure, we also offer a wide range of managed routers. It goes without saying that this is all provided along with friendly and professional advice to help you choose the one that's best for you.

MetroEthernet

Lumison MetroEthernet provides your business with all the benefits of a leased line but with even more bandwidth. Ideal if you want to support VoIP technology (Voice or Video over IP), need more speed for hosting, work across multiple sites or need to be able to send monster files to Lumison datacentres without any worries.

Available across most UK cities – and surrounding areas - MetroEthernet offers you the option of 10Mb, 100Mb or 1Gbps connectivity, but with the advantage of only ever paying for the average amount you use each month. So no matter how much (or how little) bandwidth you use, that's all you pay for.

MetroEthernet is also proving increasingly cost effective for customers wanting to maintain file servers in our datacentres for Disaster Recovery purposes. This provides high capacity access to their servers for live or overnight backups, combined with office Internet access, providing reduced IT and telecoms infrastructure costs.

Why Lumison?

We are one of the few UK ISPs to offer high amounts of burstable bandwidth – this means you can get a 2Mb, 10Mb and even up to 1Gb connection to our network, but only pay for the average bandwidth you use each month. So

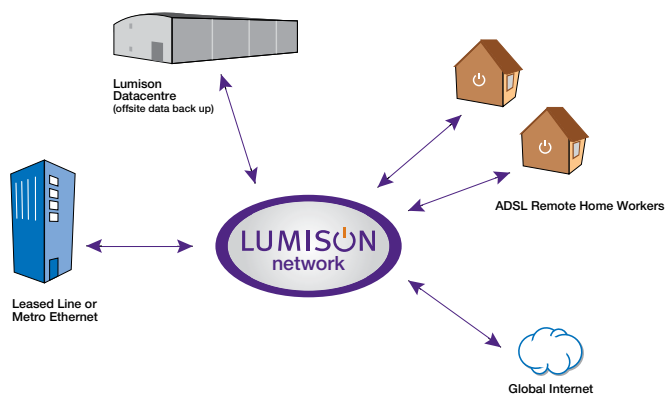

you can enjoy greater flexibility and better value for money simultaneously. We also have capped flexible bandwidth options if you want to ensure your monthly outgoings kept within your budgets.

All our leased line and MetroEthernet products come with a fully business-class service level agreement, which guarantees you better, faster responses to faults.

You can enjoy peace of mind with a resilient network that is supported by multiple independent bandwidth supplies, each using separate fibre optic routes. So, day or night, your connection is there for you, and should there be any problems then, day and night our support team are on hand to put things right, quickly, efficiently and without fuss.

Here to help...

Not sure how to get the most out of a leased line? Confused about how much bandwidth you might need? Trying to

decide between a leased line and MetroEthernet? Unsure what's available in your area? No matter how big the question, we're here to help you get the best leased line option for your business. To find out more and discuss your needs in-depth, call us now on 0845 1199 911.

Leased line and MetroEthernet key features

Whichever option you go for, you'll enjoy the following benefits:

Symmetrical, high capacity bandwidth services, with national network coverage
Free email Virus scanner
Free and Anti-Spam
Free SMTP mail feed
Business-class Service Level Agreement (30min response with target 1hr time-to-fix)
Includes the hosting of 5 domain names
Fixed IP address and routed IP subnets
24x7x365 circuit monitoring by the Lumison NOSC
24x7x365 telephone and email technical support
Web-based access to bandwidth usage graphs
Dedicated account manager
Burstable and flexible bandwidth options with access from 2mb/s up to 1GB/s
Wide variety of managed router options
X.21 (Leased Line) or Ethernet (Metro Ethernet) termination to your office
ISDN back up or diverse local loop carrier solutions available (please call us)
